

# Code Similarity Analysis Report

## Analysis Summary

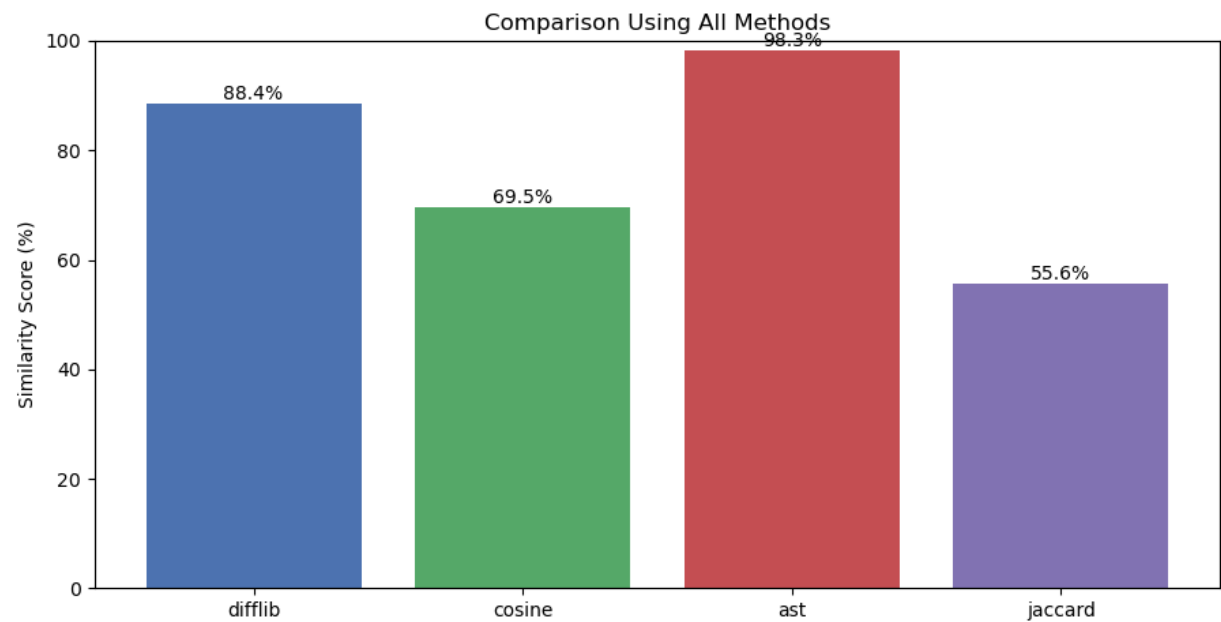

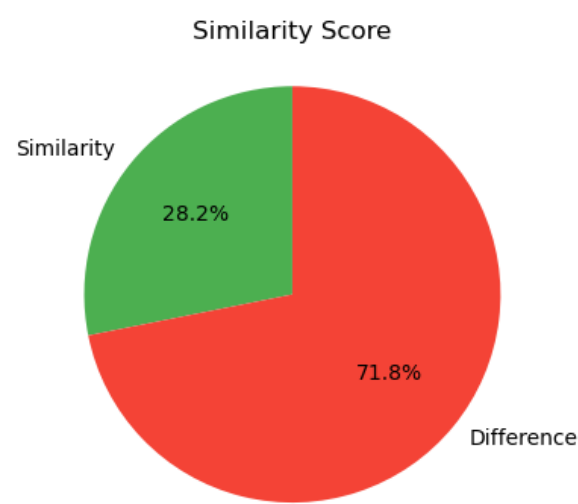

Comparison between: py\_plag2.txt and py\_plag1.txt

Selected Method: COSINE

Similarity Score: 69.49%

Plagiarism Threshold (70%) Exceeded: No

## Similarity Visualizations

# Code Similarity Report

## Preprocessing Details

Before comparison, the following preprocessing steps were applied:

1. All comments were removed
2. All identifiers were normalized (variables ? vN, functions ? fN, etc.)

## Original vs Preprocessed Code

Original py\_plag2.txt:

```
# Function to add two numbers
def addition(x, y):
    return x + y # Return result

output = addition(3, 4)
print("Sum is", output)
```

Preprocessed py\_plag2.txt:

```
def f0(p0, p1):
    return x + y
v0 = addition(3, 4)
print('Sum is', output)
```

Original py\_plag1.txt:

```
def add(a, b):
    return a + b

result = add(3, 4)
print("Sum is", result)
```

Preprocessed py\_plag1.txt:

```
def f0(p0, p1):
    return a + b
v0 = add(3, 4)
print('Sum is', result)
```

## Detailed Differences (Preprocessed Code)
